

## Simple Harmonic Motion

2004	<p><b>C3.</b> A piston connected to a water wheel oscillates about a point <math>O</math> with simple harmonic motion of period <math>8\pi</math> seconds and maximum acceleration <math>0.25 \text{ m s}^{-2}</math>.</p> <p>(a) Calculate the amplitude of the motion. <span style="float: right;">3</span></p> <p>(b) Calculate the positions, relative to <math>O</math>, of the piston when it is moving with half its maximum speed. <span style="float: right;">4</span></p>
2005 SP	<p><b>5.</b> A particle performs simple harmonic motion in a straight line, between points <math>A</math> and <math>B</math>, with period <math>0.6</math> seconds. Initially it was projected from <math>C</math>, the midpoint of <math>AB</math>, with speed <math>\frac{\pi}{5} \text{ m s}^{-1}</math> towards <math>B</math>.</p> <p>Calculate</p> <p>(a) the length of <math>AB</math>, and <span style="float: right;">3</span></p> <p>(b) the time taken by the particle to move directly from <math>C</math> to <math>D</math>, the midpoint of <math>CB</math>. <span style="float: right;">2</span></p>
2005	<p><b>A3.</b> A particle executes simple harmonic motion about a point <math>O</math>. The magnitude of the maximum acceleration is <math>1 \text{ m s}^{-2}</math> and the maximum speed is <math>4 \text{ m s}^{-1}</math>.</p> <p>Calculate the period of the motion. <span style="float: right;">4</span></p>
2006	<p><b>A2.</b> A piston oscillates about the point <math>O</math> with simple harmonic motion of amplitude <math>0.25 \text{ m}</math>.</p> <p>Calculate the distance of the piston from <math>O</math> when its speed is half its maximum speed. <span style="float: right;">5</span></p>
2007	<p><b>A2.</b> A piston in a machine moves with simple harmonic motion about a point <math>O</math>. The period of the motion is <math>4\pi</math> seconds. When the piston is <math>0.2 \text{ m}</math> from <math>O</math> its speed is <math>0.8 \text{ m s}^{-1}</math>.</p> <p>Calculate the amplitude of the motion. <span style="float: right;">4</span></p>
2008	<p><b>A8.</b> In a fairground game, a small target <math>T</math> executes simple harmonic motion about a point <math>O</math> with extreme points <math>A</math> and <math>B</math>. When the target is <math>1 \text{ metre}</math> from <math>O</math>, its speed is <math>\frac{\pi}{\sqrt{3}} \text{ m s}^{-1}</math> and when it is <math>\sqrt{3} \text{ metres}</math> from <math>O</math> its speed is <math>\frac{\pi}{3} \text{ m s}^{-1}</math>.</p> <p>(a) Show that the amplitude of the motion is <math>2 \text{ metres}</math> and calculate the period of the oscillation. <span style="float: right;">5</span></p> <p>(b) A player has to shoot at the target, but it is only visible to the player when it is to the right of the point <math>P</math> as shown in the diagram.</p> <div style="text-align: center;">  </div> <p>Given that the target takes <math>0.75</math> seconds to move from <math>P</math> to <math>B</math>, calculate the distance <math>PB</math>. <span style="float: right;">5</span></p>
2009	<p><b>A1.</b> A particle is projected from <math>O</math> at time <math>t = 0</math> and performs simple harmonic motion with <math>O</math> as the centre of the oscillation. The amplitude is <math>10 \text{ cm}</math> and the speed of projection is <math>10 \text{ m s}^{-1}</math>. Calculate:</p> <p>(a) the period of the oscillation; <span style="float: right;">2</span></p> <p>(b) the speed of the particle when it is <math>5 \text{ cm}</math> from <math>O</math>. <span style="float: right;">2</span></p>

2011	<p><b>A5.</b> A charged particle oscillates with simple harmonic motion of amplitude 0.05 metres between two parallel plates in an electric field. The speed of the particle, <math>v</math> metres per second, satisfies the differential equation</p> $v \frac{dv}{dx} = -\omega^2 x,$ <p>where <math>x</math> metres is the displacement from a fixed point and <math>\omega</math> is a constant.</p> <p>Obtain an expression for <math>v^2</math> in terms of <math>x</math> and <math>\omega</math>. <span style="float: right;"><b>3</b></span></p> <p>Given that the period of the oscillation is <math>1.5 \times 10^{-4}</math> seconds, calculate the maximum speed of the particle. <span style="float: right;"><b>3</b></span></p>
2014	<p><b>A2.</b> An object oscillates on the <math>x</math>-axis about the origin, <math>O</math>, with simple harmonic motion. The period of the oscillation is <math>\frac{14\pi}{5}</math> seconds, and when the object is at point <math>K</math>, 1.2 metres from the origin, it is moving away from the origin with a velocity of <math>2.5 \text{ m s}^{-1}</math>.</p> <p>Find the amplitude of the motion and the time it takes for the particle to travel from <math>O</math> to <math>K</math>. <span style="float: right;"><b>4</b></span></p>
2016 SP	<p><b>6.</b> An object moves horizontally along the <math>x</math>-axis with simple harmonic motion about a point <math>O</math>. The period of the oscillation is 12 seconds. It is released from its extreme position <math>A</math>, a distance of 3 metres from <math>O</math>.</p> <p>Find the first time the particle will be a distance of 4 metres from <math>A</math>. <span style="float: right;"><b>4</b></span></p>
2016	<p><b>5.</b> The tip of a saw oscillates with simple harmonic motion.</p> <ul style="list-style-type: none"> <li>• When the tip is 5 mm from its centre of motion it has a velocity of <math>2 \text{ m s}^{-1}</math>.</li> <li>• When it is 7 mm from the centre it has a velocity of <math>1 \text{ m s}^{-1}</math>.</li> </ul> <p>Calculate the amplitude of the motion and find the number of oscillations in one second. <span style="float: right;"><b>5</b></span></p>
